Populus ×canadensis 'Spijk'

**Yükseklik**: 20-25 m, fast growing  
**Taç**: broad ovoid, half-open crown  
**A?ac kabu?u ve dallar?**: brown, grey  
**yaprak**: green  
**Çiçekler**: red, flowers in April  
**Meyveler**: fruitless cultivar  
**Dikenleri?neler**: None  
**Toksisite**: in gardens, (rare) evcil hayvanlar ve çiftlik hayvanlar?nda genellikle toksik etkisi yoktur  
**Toprak çe?idi**: clayed soil, loamy soil, sandy soil  
**Dikme yerinin gereksinimleri**: Sert yüzeylere kar?? dayan?kl?  
**rüzgar sertli?i**: 4 (-34,4 ile -28,9 °C)  
**rüzgara kar?? dayan?kl?l?k**: fairly  
**Uygulamalar**: bulvarlar ve geni? caddeler, sahil bölgesi  
**?ekil**: açık gövdeli a?ac  

This Dutch selection has a broad crown with a straight to somewhat tortuous trunk. When young the tree is still fairly narrow and grows loosely. Young bark is light coloured. The dark green leaves are diamond-shaped to triangular and often have a red leaf stalk. In the autumn the leaves turn yellowish-green. The tree bears male catkins as flowers. 'Spijk' is little sensitive to leaf spot disease but is certainly sensitive to rust and canker. The tree is reasonably wind-resistant. Can be used in landscape and urban settings. In coastal regions it is used as a forestry tree. It prefers fertile moist soil. Winter hardiness zone: 4
