Quercus robur 'Pendula'

Yükseklik: 10 - 15 (20) m
Taç: broad weeping, half-open crown
Aç kabu?u ve dallar?: dark grey, deep grooves, twigs reddish-brown
Yaprak: obovate, lobed, green, 5 - 14 cm
Çiçekler: greenish-yellow catkins, 2 - 4 cm long, May
Meyveler: ovoid to oval acorn, 1.5-2.5 cm, in groups of 2 to 6
Dikenleri?neler: None
Toksisite: insanlar, (iri) evcil hayvanlar ve çiftlik hayvanlar?nda genellikle toksik etkisi yoktur
Toprak çe?idi: nutritious and moist
toprak nemlili?i: nemli toprakta ekilebilir
Dikme yerinin gereksinimleri: Sert yüzeylere kar?? dayan?kl? de?ildir
rüzgar sertli?i: 5a (-28,8 ile -26,1 °C)
rüzgara kar?? dayan?kl?l?k: good
Uygulamalar: endüstri alan?
?ekil: aç?k gövdeli a?aç
Köken: England, 1788
E?anlam?lar?: Quercus robur var. dauvessii

Ornamental weeping form attaining 10-15 (20) m in height and 7 - 15 m in breadth. The branches grow somewhat away from the trunk and the twigs are very pendulous. They sometimes grow 2 m in length per year and touch the ground. The bark is dark grey, later grooved. Young twigs are reddish-brown. The variable leaves are obovate to elongated oval, 5 - 14 cm long and 4 - 8 cm wide, with 3 to 5 pairs of blunt lobes. The foliage is often densely grouped at the end of the twigs. The leaves emerge brownish-red in the spring. They do not remain on the tree for long in the winter, which produces a pronounced winter silhouette. The ovoid acorns are grouped in twos to sixes and are a maximum of one-third enclosed in the cupule: the latter is covered with small, triangular, contiguous scales. Very suitable as an arbour tree.
